Biatain® Ibu
C.A.R.E.S for painful wounds

Biatain C.A.R.E.S
About the patient
About the wound
About the outcome
6 out of 10 wounds are painful

- 83% of patients with arterial ulcers report pain
- 65% of patients with venous leg ulcers experience severe or continous pain with a leg ulcer
- 50% of patients with venous leg ulcers could not tolerate compression banding, mainly because of pain

"Chronic wound pain is frequently severe, persistent and quickly leads to sleeplessness, emotional distress, loss of self esteem, social isolation and depression"

Studies on Biatain Ibu show positive healing rates in chronic wounds

Description
Biatain Ibu is a soft and flexible absorbent foam dressing. Biatain Ibu is the first and only dressing ever to combine moist wound healing with local release of ibuprofen.

- Unique 3D foam structure that conforms closely to the wound bed for superior absorption – also under compression
- Contains 0.5 mg/cm² of ibuprofen
- One dressing (10 x 12cm) contains 60mg of ibuprofen which is continuously released for up to 7 days, in proportion to the level of exudate
- No levels of ibuprofen detectable in blood samples

Usage
Biatain Ibu can be used for a wide range of exuding wounds, including leg ulcers, pressure ulcers, second-degree burns, postoperative wounds, skin abrasion and non-infected diabetic foot ulcers. Biatain Ibu Non-Adhesive can also be used on donor sites. Biatain Ibu is suitable for use in combination with compression therapy.

Comparative studies have shown a reduction in wound pain in patients wearing Biatain Ibu

- 74% of patients experienced pain relief in first evening with Biatain Ibu
- Biatain Ibu successfully controlled patient’s pain so much so that compression was tolerated
- Significant different observed in patient well being between Biatain Ibu and local best practice
Biatain Ibu C.A.R.E.S

**CONFORMABILITY**

- Biatain foam conforms
  - Conforms closely to the wound bed
  - Optimal moist wound healing environment
  - Local release of Ibuprofen®

**We believe that absorption is the key to wound healing**

- 3D polymer foam structure
- Absorbs exudate vertically
- Reduces the risk of maceration and excoriation

**ABSORPTION**

- Biatain retains wound exudate
  - Exudate is locked away even under compression
  - Improves patient comfort and experience

**RETENTION**

**EXUDATE MANAGEMENT**

- **Exudate management**
  - Superior absorption
  - Reduces leakage
  - Skin maceration
  - Risk of infection
  - Optimal moist wound healing environment

**THE SIMPLE CHOICE**

- **Not all foams are the same**
  Biatain foam works in the same way across the entire range. Biatain Ibu is the simple choice for local pain management.
Superior absorption for painful wounds

**Biatain® Ibu Non-Adhesive** - superior absorption for painful wounds
